The Title Is 'Baz'

An Author

23 February 2019 baz

Contents

This is a section

This is some test text. This is formatted in *italics* and **bold**, with - various – dashes—, and trailing dots…

'These quotes should be curly,' and "so should these." There should be a blank line before the next paragraph:

And then we do a simple include:

Text before a section in simple include.

Section in simple include

> This is a quote block. It should be indented slightly and shouldn't contain a line break.

> This is a quoted line block. It should be indented slightly
> and have a *line break* after 'slightly', and **formatting**.

Text before recursive include, with *italic*, **bold**, "curly quotes," and— an em dash.

Text before section in recursive include.

Section in recursive include

Text in recursive include, with *italic*, **bold**, "curly quotes," and— an em dash.

Subsection in recursive include

> "These literal double curly quotes, used where smart
> quotes gets it wrong, curl the right way even though
> they're on different lines."

> 'These literal single curly quotes, used where smart
> quotes gets it wrong, curl the right way even though
> they're on different lines.'

Test text test text test text. After this line there should be stars.

$$* * *$$

And then there should be some text $^{\text{in superscript}}$ and $_{\text{in subscript}}$, and a footnote[*] with a star, a footnote[†] with a dagger, and this should be `monospace`.

Text after recursive include. Here is a pound sign (£), a euro sign (€), and three letters with accents: ëóû.

Second section in simple include

Test text.

Text after simple include.

Subsection

This is a new paragraph. This text is Small Caps.

This is a second section

And this is *even more italic text*. Foo.

```
# Code blocks aren't spellchecked: quux
```

---

[*]This is a footnote. It should appear at the bottom of the page.

[†]Another footnote.

Inline code isn't spellchecked: `quux`.

`div` classes aren't spellchecked.

Anything in a nospellcheck div isn't spellchecked: quux.

Automatic links aren't spellchecked: http://quux.com. Neither are the targets or attributes of inline links: Foo. Neither are span classes. Anything in a nospellcheck span isn't spellchecked.
